Sodium Sesquicarbonate

GENERAL DESCRIPTION:

Sodium Sesquicarbonate is a combination of sodium bicarbonate and sodium carbonate that has a needle-like crystal structure formation.

APPLICATIONS:

- ◆ Bath Salts
- ◆ Swimming pools
- ◆ Alkaline source for various water treatment
- ◆ Heavy duty cleaning applications
- ◆ Copper & copper alloy artefact conversion
- ◆ Precipitating water softener

PHYSICAL PROPERTIES:

- ◆ Appearance: White needle-like crystal
- ◆ Odor: Odorless
- ◆ Flow: Free-flowing
- ◆ Non-caking
- ◆ pH of 1% solution: 9.9

HANDLING & STORAGE

Handling: Keep away from incompatible products (acids). Avoid dust formation and provide appropriate exhaust ventilation where dust is formed.

Storage: Store in original container. Keep in a dry, cool place. Ensure that container is tightly close after use.
